

(Currently Amended) 1. A method for retrieving a map from an Internet web-site comprising:

- 5 a) sending a telephone number for a destination location as a map request to said Internet web-site wherein said map request is sent through an Internet Protocol with said telephone number provided in a sub-field of an universal resource locator (URL) identifying said Internet web-site exemplified by www.MAPatTEL/123-456-7890 where
- 10 MAPatTEL exemplified an URL of said web-site and 123-456-7890 exemplified a phone number is placed at said sub-field of said URL; and
- b) receiving a map for said destination location from said Internet web site associated with said telephone number.
- 15

(Currently Amended) 2. The method of claim 1 wherein:

- said step a) of sending said telephone number comprising a step of sending said telephone number as a part of said map request to a map server linked by said URL for processing said telephone number provided as a sub-field of said URL ~~identifying said map server~~ for obtaining an address for said telephone number of said destination location.
- 20

25 (Currently Amended) 3. The method of claim 2 wherein:

- said step b) further comprising a step of retrieving from said map server a map of said destination location identified by said address.
- 30

(Currently Amended) 4. The method of claim 1 wherein:

5 said step a) of sending said telephone number as part of said
 map request comprising a step of sending said telephone
 number from a mobile phone through an Internet Protocol
 for processing communications between said mobile phone
 to and a map server for processing said map request with
 said telephone number for obtaining an address for said
 destination location associated with said telephone number.

10

(Currently Amended) 5. The method of claim 4 wherein:

15 said step a) of sending said telephone number as part of said
 a map request from a mobile phone to a said map server
 further comprising a step of pushing a map-retrieval key on
 said mobile phone for logging on to said map server through
 an Internet Protocol for said mobile phone.

(Currently Amended) 6. The method of claim 1 wherein:

20

 said step a) of sending said telephone number of a
 destination location as part of said a map request to said
 Internet web-site further comprising a step of said Internet
 web site receiving and normalizing said telephone number
25 into a normalized telephone number wherein said telephone
 number is provided as a sub-field of said URL identifying
 said Internet web-site ~~into a normalized telephone number.~~

(Currently Amended) 7. The method of claim 6 wherein:

5 said step a) of sending said telephone number of a destination location as a map request with a telephone number to said Internet web-site further comprising a step of applying said normalized telephone number for searching an address listed in a database for said normalized telephone number.

10 (Currently Amended) 8. The method of claim 7 wherein:

 said step b) further comprising a step of retrieving a map of said destination location as identified by said address listed for said normalized telephone number.

15

(Currently Amended) 9. A method for retrieving a map from network server comprising:

20 a) sending a numeric input data coded for a destination location as part of a map request to said network server through an Internet Protocol with said numeric input data provided in a sub-field of an universal resource locator (URL) identifying said network server exemplified by www.MAPatTEL/123-456 where

25 MAPatTEL exemplified an URL of said network server and 123-456 exemplified a numeric input data coded for a destination location that is placed at said sub-field of said URL; and

30 b) receiving a map of said destination location from said network server associated with said numeric data input sent with said map request.

August 10, 2005

(Currently Amended) 10. The method of claim 9 wherein:

5 said step a) of sending said numeric input data coded for a
destination location as part of said a map request comprising
a step of sending said map request to said network server
with a partial telephone number of said destination location
10 as said numeric input data with said partial telephone
number provided in a said sub-field of ~~an~~ said universal
resource locator (URL) identifying said network server.

(Currently Amended) 11. The method of claim 9 wherein:

15 said step a) of sending said numeric input data coded for a
destination location as a map request comprising a step of
sending said map request from a mobile phone to a said
network server through an Internet Protocol for said mobile
phone for processing said numeric input data for obtaining a
geographic position of said destination location associated
with said numeric input data.

20

August 10, 2005

(Currently Amended) 12. An Internet system comprising:

5 an Internet web site linking to a map server for receiving a
telephone number for a destination location as part of a map
request wherein said map request is sent through an Internet
Protocol with said telephone number provided in a sub-field
of an universal resource locator (URL) identifying said
Internet web-site exemplified by www.MAPatTEL/123-456-
10 7890 where MAPatTEL exemplified an URL of said web-site
and 123-456-7890 exemplified a phone number is placed at
said sub-field of said URL; and

said Internet web site comprising a map request processor
for enabling a database search for determining a geographic
15 position of said destination location associated with said
telephone number and retrieving a map for said destination
location.

(Currently Amended) 13. The Internet system of claim 12 wherein:

20 said map request processor further comprising a database
for associating said telephone number provided in a said
sub-field of an said universal resource locator (URL)
~~identifying said Internet web-site~~ with a geographic position
25 of said destination location and associating said geographic
position of said destination location with a map.

August 10, 2005

(Currently Amended) 14. The Internet system of claim 12 wherein:

5 said map request processor further comprising a first
 database for associating said telephone number provided in
 a said sub-filed of said URL with a geographic position of
 said destination location and a second database for
 associating said geographic position of said destination
 location with a map.

10 (Currently Amended) 15. The Internet system of claim 12 wherein:

 said map request processor further comprising a telephone
 number normalization processor for normalizing said
 telephone number sent with said map request provided in a
15 said sub-filed of said URL into a normalized telephone
 number for enabling said database search for retrieving a
 map for said destination location associated with said
 normalized telephone number.

20 (Currently Amended) 16. The Internet system of claim 12 wherein:

 said map request processor further comprising a map
 request handler for handing said map request submitted ~~in~~
25 through different Internet communication protocols.

(Currently Amended) 17. The Internet system of claim 16 wherein:

 said map request handler further comprising a partial
 telephone number handler for handing said map request
30 submitted with a partial telephone number provided in a
 said sub-filed of said URL for a said destination location.

August 10, 2005

(Currently Amended) 18. The Internet system of claim 12 wherein:

5 said map request processor further comprising an automatic
Internet universal resource location (URL) linking processor
for linking to several universal resource locations (URLs) for
enabling a database search for determining a geographic
position of said destination location associated with said
telephone number provided in a said sub-filed of said URL
identifying said Internet web-site and for retrieving a map
10 for said geographic position of said destination ~~geographic~~
location.

(Currently Amended) 19. The Internet system of claim 12 further
comprising:

15 a telephone for sending said map request through a
telephonic Internet Protocol with a said telephone number of
said destination location provided in a said sub-filed of said
URL identifying said Internet website ~~to said map request~~
~~processor.~~

20

(Currently Amended) 20. The Internet system of claim 19 wherein:

25 said telephone is a wireless telephone for sending said
telephone number of said destination location through a
wireless telephonic Internet Protocol as part of said map
request.

(Currently Amended) 21. A network system comprising:

5 a map server for receiving a numeric data input coded for a destination location as a map request through an Internet Protocol with said numeric input data provided in a sub-field of an universal resource locator (URL) identifying said map server exemplified by www.MAPatTEL/123-456 where MAPatTEL exemplified an URL of said map server and 123-456 exemplified a numeric input data coded for a destination
10 location that is placed at said sub-field of said URL; and

15 said map server further includes a database-search enabling means for enabling a database search for determining a geographic position of said destination location associated with said numeric input and a map associated with said geographic position of said destination location.

(Currently Amended) 22. A network system comprising:

20 a geocentric server for receiving a numeric data input coded for a destination location as a map request through an Internet Protocol with said numeric input provided in a sub-field of an universal resource locator (URL) identifying said geocentric server exemplified by www.MAPatTEL/123-456
25 where MAPatTEL exemplified an URL of said geocentric server and 123-456 exemplified a numeric input data coded for a destination location that is placed at said sub-field of said URL; and

30 said geocentric server further includes a database-search enabling means for enabling a geocentric database search for determining a geographic position of said destination location associated with said numeric input.

August 10, 2005

(Currently Amended) 23. The network system of claim 22 wherein:

5 said geocentric server further includes a geocentric filter means for applying said geographic position of said destination location associated with said numeric input provided in a said sub-field of said URL to establish a geocentric filter for filtering a subsequent database search.

(Currently Amended) 24. The network system of claim 22 wherein:

10 said geocentric server is provided for receiving a said numeric data input ~~provided in a said~~ sub-field of said URL is further comprising provided to receive and process at least a first part of a telephone number; and

15 said database-search enabling means is provided for enabling a geocentric database search for determining a geographic position of said destination location associated with said first part of said telephone number.

20 (Currently Amended) 25. The network system of claim 23 wherein:

25 said geocentric server further includes a normalization processor for normalizing said numeric data input provided in a said sub-field of said URL into a normalized numeric data input exemplified by normalizing 94z22 into 94022 where 94022 exemplified a normalized numeric input employed for said database search for determining a geographic position of said destination location.
